ALIAS™

HIGH PERFORMANCE QUAD-ROTOR HELICOPTER

Quad-Rotor Flight Re-Imagined!

Alias™ is a clean-sheet design that focuses on the performance and design elements that make flying, and learning to fly, fun. The first mission was durability. Alias is built around a unique molded-composite frame that is combined with clever high-tech construction to make it extremely light and virtually indestructible. Your flying fun goes on and on without worrying about breakage from crash damage. Fun always comes from having more power so Alias is equipped with motors that are 50% more powerful than standard motors. A completely new flight control system was developed that provides unmatched 6-axis stability that works in the background without impacting performance and speed. It acts like a virtual spring that snaps Alias back to level controlled flight no matter what situation you find yourself in. New pilots can fly faster and perform stunning aerobatic maneuvers sooner than they ever thought possible with Alias' unique flight control system. Superior visibility is enhanced by special high intensity LED optics that clearly define the shape of Alias and can be seen from above or below. The lights are so bright and colorful that Alias makes a whole new world of night flight possible. Alias is uniquely engineered to satisfy the needs of both new pilots who want to experience the fun of flying and experienced pilots who want a fun and relaxing way to sharpen their skills.

AUTO-LEVELING SIX AXIS FLIGHT SYSTEM

3D FLIPS, ROLLS, AND TWISTS

More Durable, More Speed, More Fun!

POWERED BY TRAXXAS

Integrated high-intensity LED optics increase visibility day or night.

ALIAS

HIGH PERFORMANCE QUAD-ROTOR HELICOPTER

TRANSMITTER

Alias' ergonomic transmitter design was not overlooked as part of the total flying experience. It takes a cue from game controller design that's made for hours of comfortable use. Even the thumb pads on the gimbals contribute to the more comfortable, relaxed flying position. The precision gimbals are precisely tuned to the flight software to give the pilot a one-to-one connected feel with the Alias. Alias immediately builds pilot confidence as it responds precisely to the transmitter inputs.

Telemetry Enabled Battery Fuel Gauge

The Transmitter receives telemetry information from the Alias and provides visible and audible alerts when the battery charge level in the Alias is low. This alert gives you time to safely fly the Alias back to you when it is time to recharge the battery.

Three Flight Modes

Alias is equipped with 3 flight modes. Easy mode takes full advantage of the auto-leveling flight control software for rock-solid stability. In Easy mode, flight angles are limited to keep the speed in check while new pilots are developing their skill. In fast mode, the auto-leveling flight system is still working for you but Alias' full speed potential is unlocked, along with the ability to perform exciting aerobatic flips, twists, and rolls at the press of a button. Expert mode disables the auto-leveling flight software to give the pilot full manual control. Alias shines in Expert mode with responsive, linear control that will satisfy veteran pilots.

ALIAS

HIGH PERFORMANCE QUAD-ROTOR HELICOPTER

INCLUDED ITEMS

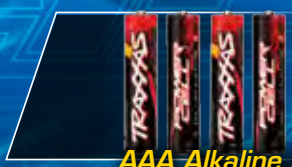

2.4GHz Transmitter

3.7 Volt LiPo Battery

High-Output USB Powered Fast Charger

AAA Alkaline Batteries

Spare Blades, Hex Wrench, and Accessory Gimbal Sticks

FEATURES

- Fast and fun!
- Quad-rotor thrust with auto-leveling 6-axis flight system
- Multiple flight modes for first-time fliers to expert pilots
- Quickly master stable hovering and flight in Easy mode
- Perform one-button flips, rolls, and twists in Fast mode
- Colorful high-intensity LED optics light the way for maximum visibility
- Four high-output motors - 50% more power than standard motors
- 650mAh LiPo battery delivers up to 15 minutes of flight time
- High-Output USB charger fast charges the battery in about half an hour
- Sleek and innovative design
- 2.4GHz Transmitter eliminates frequency conflicts
- Full line of genuine LaTrax accessories available
- LaTrax is Powered by Traxxas for unmatched customer support

2.4GHz Transmitter Features:

- Three customizable flight modes : Easy, Fast, Expert
- Reliable 2.4GHz control
- Low battery indicators for transmitter and helicopter
- Electronic trim controls / Digital trim indicators
- Programmable action buttons
- LCD transmitter display

Full product support and Lifetime Electronics Warranty through Traxxas
